Despite Oregon's reputation as a 'clean energy' leader, other states have leapfrogged us in climate action efforts.

States and jurisdictions committed to 100% clean energy

- California
- Connecticut
- Delaware
- Maine
- Maryland
- Massachusetts

States with carbon pricing policies

- California
- New Hampshire
- New Jersey
- New York
- Rhode Island
- Vermont
- Oregon

100% clean electricity in the West

- Washington: 100% by 2045
- California: 100% by 2040
- Nevada: 100% by 2040
- Oregon: 50% by 2040

Low-carbon fuel standards

- Washington
  - Puget Sound region: 25% reduction by 2035*
  - Statewide: 20% reduction by 2035*
- California: 20% reduction by 2030
- Oregon: 10% reduction by 2025

* Proposed as of December 2019.
Unless we take responsibility for reducing our pollution now, many of climate change's worst impacts will become permanent.

Oregon's existing climate policies are not enough

[Diagram showing Oregon's carbon pollution timeline and goals]

Oregon’s existing climate policies are not enough. The state's current policies are expected to result in pollution levels of 64-65 million MTCO2e in 2017 (prelim). The 2020 goal is to reduce pollution to 51 million MTCO2e, and the 2050 goal is to reduce it to 14 million MTCO2e.

Climate action is good for our health, jobs, and communities.
